DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-36 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. As per the most recent interpretation of the Interim Guidelines regarding 35 U.S.C. 101, claims 1-36 define non-statutory processes because they merely manipulate an abstract idea (the mathematical manipulation of data (voice information and text)) without a claimed limitation to produce a useful, concrete, tangible result. If the acts of a claimed process manipulate only numbers, abstract concepts or ideas, or signals representing any of the foregoing, the acts are not being applied to appropriate subject matter (Benson, 409 U.S. at 71-72, 175, USPQ at 676). Furthermore, claims define nonstatutory processes if they simply manipulate abstract ideas (Warmerdam, 33 F.3d at 1360, 31 USPQ2d at 1759). Lastly, in evaluating claims in view of 35 U.S.C. 101, the "limited to the technological arts" test is no longer valid (see Annex III of the Interim Guidelines).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-36 are rejected under 35 U.S.C. 102(b) as being anticipated by Hollier (5794188).

As per claims 1,10, Hollier (5794188) teaches a method to enhance the intelligibility of speech in an audio signal in a communications path (col. 2 lines 22-28, lines 48-60) having an adjustable gain in the frequency domain (as adjusting filtered gains – col. 8 lines 1-15), along with masking ratios attributed to SNR (col. 6 line 65 – col. 7 line 10), loudness (col. 14 lines 54-65), spectral balance (as spectral measurements - col. 7 lines 1-20), and calculating error activity and entropy values and generating an opinion score based on these effects (col. 11 lines 20-65).

As per claims 2-4, Hollier (5794188) teaches broadband gain adjustment, as well as particular frequency gain adjustment (via masking – col. 8, lines 10-43).

As per claims 5-8,12,15, Hollier (5794188) teaches equivalent masking/gain adjustments via Bark frequency adjustments and perceptual masking (col. 6 line 20 – col. 7 line 30).

Art Unit: 2626

As per claims 9,11,13, Hollier (5794188) teaches repeating the process to obtain an average that measures noise/clipping, and using energy values to determine the highest intelligibility (col. 11 lines 20-40).

Claims 16-36 are similar in scope and content to claims 1-15 noted above; as such, claims 16-36 are rejected under similar rationale as presented above.
